

**NOW A FREE OFFER FOR NEW CLIENTS FOR ALL ANPR SERVICES
STATIC OR MOBILE**

All Under One Roof. Managed By Us, Controlled By You!!

We had been asked to put a tailor made package together for large retail parks and housing associations and Hotels. We based the model on the model used by the council and TFL Congestion Charge and Dartford toll using mobile and static ANPR.

We spent a great deal of time and money building the exact requirement needed to facilitate a large housing association with estates in close proximity thus allowing us to be able to put patrols together to protect allocated parking for those who are entitled to it. The offer consisted of a number of options shown below,

As it would be impossible to show you the calibre of the programme in an email, we would welcome the opportunity to visit yourself to present our work, we do realise that this industry comes with a stigma but please be assured we work in the best possible manor to give the client exactly what they require.

We offer 12 month contracts, in house management plus a number of options to be able to take payments via all methods

We also have different domain names to display on any vehicles or patrols to go with the package

The easy to use web-based system designed to handle the Processes required raising and managing Parking Charge Notices (and associated appeals) via a user-friendly interface.

PCNPro© is an easy to use web-based system designed to handle the processes required to raise and manage Parking Charge Notices (and associated appeals) via a user-friendly interface.

Being a web-based system, PCNPro© can be used with any web-enabled device (e.g. PCs, tablets and smart phones) by personnel who are logged-in via the secure gateway.

- administrators can process PCNs and log progress
- Managers can view progress and view statistics including income, site statements, etc.
- sites can add their permitted users and can upload ad-hoc offence details (parking out of bay, unauthorised use of disabled spaces, etc)
- vehicle keepers can pay their parking charge notice fees online via a secure payment portal
- auditors can be shown evidence of the sound management processes employed by users of PCNPro©

The system caters for multiple-site use. Each having its own unique id. PCNs are raised independent of their originating site thus enabling batch processing and printing of notices, and status changes such as 'keeper details received', etc.

PCNPro© - how does it work?

Some systems on the market use old-fashioned desktop technology to function. Often, they are simple MS Access databases that are given a 'bespoke' front-end. PCNPro© - on the other hand - uses a fully featured web-database to manage the records that it stores. Web-databases are able to store literally millions of records with ease. They can be backed-up by the system administrator to provide data security independent of location.

A key feature of our system would be to offer it to other Parking companies through PCN PRO; this would also make auditing companies a much easier process as the system would be compliant by IPC and the BPA

We offer PCNPro© in three formats:

- as a managed service via our website
- as an 'add-on' to your existing website
- on a separate virtual server (i.e. your PCNPro© application and your website hosted on a dedicated private server)

We can provide any of the above options 'customised' to suit your exact requirements as required

We would be pleased to provide prices for any of the options above and work directly with yourself.

Mobile Patrol Parking Management

We can provide the Mobile Patrol Parking Management services for your organisation, to ensure that you benefit from the full earning potential of your parking facilities.

Our service is particularly useful for organisations that operate a number of sites but struggle to maintain regular patrols due to staffing issues

Our Mobile Patrol Parking Management facility offers many advantages to the facility owner including:

- ***removing the burden of recruiting and managing your own staff***
- ***no problems associated with staff sickness or holidays***
- ***fixed price contract for an agreed period***
- ***income reports***

Self-managed Parking with Enforcement (Block Management)

If you own or lease a car park we can support you by providing signage and enforcement facilities using our tablet/smart phone application to upload details and photographs of offending vehicles to our processing website.

Once details are uploaded, we implement our full Parking Charge Notice programme which includes:

- ***requesting keeper details from DVLA***
- ***creating and sending Parking Charge Notices to registered keepers***
- ***an appeals procedure***
- ***receipt of parking charge notice fees via online payment or receipt of cheques***
- ***sending reminder notices to registered keepers who have not paid after 14 days of issue***
- ***the appointment of a debt recovery agency if PCNs are not paid within the allowed time period***

Cashless Payment Parking

We can provide a web-based cashless parking payment system which will enable your clients to:

- ***pay their parking fees in advance for a number of parking sessions***

- ***'book' a parking space in advance***
- ***minimise the amount of time spent in parking their vehicle before moving on to their final destination***
- ***fixed price contract for an agreed period***

As a parking provider, you will benefit from:

- ***knowing in advance how many spaces have been booked***
- ***option A: reduced cash handling on site. Option B: no cash handling on site if pre-payment and online payment on-site is adopted***
- ***online Portal access to statistics***
- ***daily pre-booked space lists for staff to administer on-site***
- ***opportunities to streamline the operation of your car parking facilities***

If your organisation has a car park for its staff and visitors you know doubt use an in-house 'permit' system to identify that it is being used by authorised personnel only.

Permit-Based Parking with (optional) Enforcement

If your organisation has a car park for its staff and visitors you know doubt use an in-house 'permit' system to identify that it is being used by authorised personnel only.

Some organisations are unlucky in terms of the convenience of their car park to 'unauthorised' users who find it useful for a trip to the local shops or even a railway station!

We can help in this situation by providing a web-based permit management system which may be used to hold the details of the vehicles owned by staff and approved visitors. This facility makes it easy for reception staff to manage the details of authorised users either as temporary (visitor) or permanent (staff) users. The system will allow paper permits to be printed for windscreen use if required, alternatively, the web portal may be accessed using mobile devices (smart phones or tablets) to check the vehicle registrations of vehicles not thought to be authorised. This enables staff to either:

Add New Permitted User Details for Site:

Name:

Reg. No:

Make:

Model:

Colour:

Tel.No:

House Number: (or house name)

Address (extra details): (other than site address)

Type of Use

Temporary from: dd mm yyyy Time: hh mm

Temp. Duration: (in hours)

OR

Permanent: (ie. resident, staff, or regular visitor to be excluded from ticketing)

Active:

- ***leave a paper 'warning notice' on the offending vehicle, OR***
- ***leave a paper 'parking charge notice' on the offending vehicle (if this option has been agreed with ANPR PC Ltd), OR***
- ***upload 2 photographs, the vehicle registration number, and an offence code to our web-portal using a smart phone or tablet in order to start the enforcement process (if this option has been agreed with ANPR PC Ltd)***

As a parking provider, you will benefit from:

- ***knowing that you can identify 'unauthorised' users of you car park(s)***
- ***replacing your 'in-house' permit system with a web-based (purpose built) management system***
- ***using (if chosen) the enforcement option to seek recompense for unauthorised parking using a third party organisation***

- **removal of 'on-site' disputes involving your staff and the drivers of offending vehicles by stating that you use an external parking company to manage the site**
- **a low cost managed service which enables your staff to concentrate on their day-to-day business**

ANPR Parking Control

"The Most Advanced Number Plate Recognition In The World"
